Jiawei CHEN

Crystal Structure Prediction (CSP) / Machine Learning (ML) / First-Principles Calculations

chen121760@qq.com github.com/chen121760 chen121760.github.io

Guangdong University of Technology M.S. in Materials Physics and Chemistry

Guangzhou, Guangdong, China

Skills

Programming	Python, Bash, LaTeX
Software & Tools	VASP, Quantum ESPRESSO, USPEX, SISSO, MatterSim, OriginPro

Education

2027.06	School of Physics and Optoelectronic Engineering, **Guangdong University of Technology**
2024.09	M.S. Candidate in Materials Physics and Chemistry
2024.06	School of Chemical Engineering and Light Industry, **Guangdong University of Technology**
2020.09	B.S. in Applied Chemistry **(Exemption from graduate entrance examination)**

Honors & Awards

- Graduate Elite Talent Program, Guangdong University of Technology
- First-Class Graduate Scholarship (2024, 2024–2025), Guangdong University of Technology
- Third Prize, South China Undergraduate Physics Experiment Competition (2022)
- Second Prize, Guangdong Division of the National Mathematical Contest in Modeling (2022)
- Outstanding Student Scholarship (2020–2023), Guangdong University of Technology

Research Experience

present
2026.01
CSP of Hydrogen-Based Superconductors via Multi-Objective Optimization | GDUT
- Developed a multi-objective optimization framework integrating thermodynamic stability and superconducting properties into USPEX
- Establishing a closed-loop workflow of search–screen–validate–update
- Developed a web-based visualization and post-processing platform for USPEX

present
2025.01
CSP Driven by Universal Machine Learning Potentials | GDUT
- Integrated universal ML potentials into USPEX for faster CSP
- Fine-tuned MatterSim to improve prediction accuracy under high pressure

2026.01
2025.01
High-Throughput Screening of Conventional Superconductors | GDUT
- Combined structure generators with MatterSim for high-throughput screening of hydrogen-based superconductors
- Accelerated substitution screening of layered boride superconductors using MatterSim

2026.01
2024.09
Interpretable Prediction Model for T_c of Hydrogen-Based Superconductors | GDUT
- Collected, preprocessed datasets and performed feature engineering
- Constructed interpretable models using SISSO
- Revealed relationships between pressure, electronic structure, and superconductivity

2024
2022
Defect Engineering for Hydrogen Evolution Reaction in 2D Materials | GDUT
- Systematically investigated the effects of defects on electronic structure and HER activity of HfX_2 (X = S, Se, Te)
