Jiawei CHEN

Crystal Structure Prediction (CSP) / Machine Learning (ML) / First-Principles Calculations

chen121760@qq.com github.com/chen121760 chen121760.github.io

Guangdong University of Technology M.S. in Materials Physics and Chemistry

Education

2027.06	School of Physics and Optoelectronic Engineering, **Guangdong University of Technology**
2024.09	M.S. Candidate — GPA: 4.01/5.0 in Materials Physics and Chemistry
2024.06	School of Chemical Engineering and Light Industry, **Guangdong University of Technology**
2020.09	B.S. — GPA: 3.73/5.0 in Applied Chemistry

Honors & Awards

- Exempted from Graduate Entrance Examination
- Graduate Elite Talent Program, Guangdong University of Technology
- First-Class Graduate Scholarship (2024, 2024–2025), Guangdong University of Technology
- Third Prize, South China Undergraduate Physics Experiment Competition (2022)
- Second Prize, Guangdong Division of the National Mathematical Contest in Modeling (2022)
- Outstanding Student Scholarship (2020–2023), Guangdong University of Technology

Research Experience

2026.05
2026.04
USPEX-Analyzer: Browser-based analysis tool for USPEX V10.5
- Developed a browser-based post-processing tool for USPEX outputs, supporting interactive convex-hull/Pareto/genealogy visualization, multi-condition filtering, and export
- Listed on USPEX official website

Present
2026.01
CSP of Hydrogen-Based Superconductors via Multi-Objective Optimization
- Embedded Interpretable Prediction Model into USPEX's multi-objective optimization to co-optimize thermodynamic stability and superconducting properties
- Establishing a closed-loop workflow of search–screen–validate–update

Present
2025.01
CSP Driven by Universal Machine Learning Potentials
- Integrated universal ML potentials into USPEX for faster CSP
- Fine-tuned MatterSim to improve prediction accuracy under high pressure

2026.01
2025.01
High-Throughput Screening of Conventional Superconductors
- Combined structure generators with MatterSim for high-throughput screening of hydrogen-based superconductors
- Accelerated substitution screening of layered boride superconductors using MatterSim

2026.01
2024.09
Interpretable Prediction Model for T_c of Hydrogen-Based Superconductors
- Collected, preprocessed datasets and performed feature engineering
- Constructed interpretable models using SISSO
- Revealed relationships between pressure, electronic structure, and superconductivity

2024
2022
Defect Engineering for Hydrogen Evolution Reaction in 2D Materials
- Investigated the effects of defects on electronic structure and HER activity of HfX_2 (X = S, Se, Te)

Skills

Programming Python, Bash, LaTeX
Software VASP, Quantum ESPRESSO, USPEX, SISSO, Lammps
