

JIAWEI CHEN

Crystal Structure Prediction (CSP) / Machine Learning (ML) / First-Principles Calculations

@ chen121760@qq.com  github.com/chen121760  chen121760.github.io

 Guangdong University of Technology  M.S. in Materials Physics and Chemistry

Education

2027.06	School of Physics and Optoelectronic Engineering, Guangdong University of Technology
2024.09	M.S. Candidate GPA: 4.01/5.0 in Materials Physics and Chemistry
2024.06	School of Chemical Engineering and Light Industry, Guangdong University of Technology
2020.09	B.S. GPA: 3.73/5.0 in Applied Chemistry

Research Experience

Present	CSP of Hydrogen-Based Superconductors via Multi-Objective Optimization
2026.01	▶ Embedded Interpretable Prediction Model into USPEX's multi-objective optimization to co-optimize thermodynamic stability and superconducting properties ▶ Establishing a closed-loop workflow of search–screen–validate–update
Present	CSP Driven by Universal Machine Learning Potentials
2025.01	▶ Integrated universal ML potentials into USPEX for faster CSP ▶ Fine-tuned MatterSim to improve prediction accuracy under high pressure
2026.01	High-Throughput Screening of Conventional Superconductors
2025.01	▶ Combined structure generators with MatterSim for high-throughput screening of hydrogen-based superconductors ▶ Accelerated substitution screening of layered boride superconductors using MatterSim
2026.01	Interpretable Prediction Model for T_c of Hydrogen-Based Superconductors
2024.09	▶ Collected, preprocessed datasets and performed feature engineering ▶ Constructed interpretable models using SISSO ▶ Revealed relationships between pressure, electronic structure, and superconductivity
2024	Defect Engineering for Hydrogen Evolution Reaction in 2D Materials
2022	▶ Investigated the effects of defects on electronic structure and HER activity of HfX_2 (X = S, Se, Te)

Research Software

SISSO-Analyzer: Interactive Analysis and Validation Tool for SISSO

- ▶ Built a browser-based tool for quantitative validation, visualization, and Pareto comparison of SISSO candidate models.
- ▶ Supports holdout metrics, per-model diagnostics, and multi-task analysis.

SISSO-Sage: AI-Assisted Evidence Review for SISSO Models

- › Built a local AI workflow that validates SISSO runs and shortlists multiple candidate formulas using holdout metrics, Pareto layers, generalization evidence, and domain checks.
- › Connects feature metadata and extraction code to model-level evidence, with unresolved scientific meaning reserved for researcher review.

USPEX-Analyzer: Interactive Analysis Platform for USPEX

- › Developed a browser-based post-processing platform for interactive analysis and visualization of USPEX structure-prediction results.
- › Supports convex-hull, Pareto, genealogy visualization, multi-condition filtering, and data export.
- › Listed as a recommended community tool on the official USPEX website.

Honors & Awards

- › Exempted from Graduate Entrance Examination
- › Graduate Elite Talent Program, Guangdong University of Technology
- › First-Class Graduate Scholarship (2024, 2024–2025), Guangdong University of Technology
- › Third Prize, South China Undergraduate Physics Experiment Competition (2022)
- › Second Prize, Guangdong Division of the National Mathematical Contest in Modeling (2022)
- › Outstanding Student Scholarship (2020–2023), Guangdong University of Technology

Skills

Programming Python, Bash, LaTeX

Software VASP, Quantum ESPRESSO, USPEX, SISSO, LAMMPS
